

Release Notes 1.6.4

Web App 6_20_22

1. Auto-Link Orders

Auto-link orders together when two or more orders are placed on the same day for the same patient

Note: Currently, auto-linking only happens for orders placed by TRIAGE users (this will be expanded for orders placed by CLINICIAN users sometime in the future on both mobile and web)

Benefit of Auto-Linking: Eliminates the need to update multiple orders with the same information, thus saving time and reducing mistakes – see how this works with an example on the next page . . .

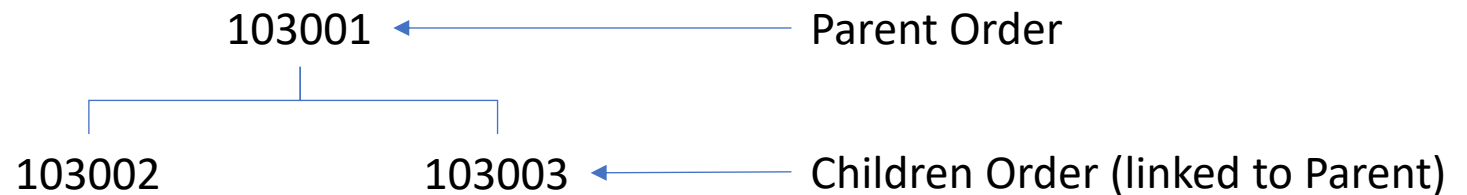

EXAMPLE:

An Order is placed for John Smith related to Wound 1 on June 13, 2022 – The order number is 103001.

Sometime later that same day another order is placed for John Smith, this time for Wound 2 – The order number is 103002.

Archangel automatically links these orders together. The first order becomes the “Parent Order”, the second order becomes a “Child Order” then the two are automatically linked together by Archangel.

Then, sometime later that day a 3rd order is placed, this time for Wound 3 – The order number assigned is 103003. This order becomes another “Child Order” and is linked to the “Parent Order”.

All data in the **RED BOXES** in a Parent Order is linked to Child Orders

Data in the **BLUE BOXES** in a Parent Order is NOT linked to the Child Orders

ICD-10 codes and Products are NOT Linked

Physician, Biller, STATUS etc. are linked

Ship To / Bill To are Linked

All Order Status Tracking is Linked

In rare cases, a user may need to un-link an order (like if the user wants to cancel one of the child orders). This is done by clicking the “Un-Link Order” button and then confirming this action by clicking the “Continue” button in the pop-up.

Note: Proceed with caution, an un-linked order cannot be re-linked.

Manage Notes

Triage Tracking Notes and Report

- Same Patient, Same day, only one order is shown
- Notes for new orders take 20 min to show on the Report, notes added to old orders are updated instantly.
- Parent and Child Order: Displaying notes of Parent Order and when a Child Order Triage tracking notes are updated, it will not reflect. 103439 was Child Order and 103410 is the Parent of it. So, if we update 103410 it is showing in the Triage notes report. 103439 is Child and hence notes are not shown.
